Super Fox Mode

Taken directly from the [N5J Jarvis Island DXpedition website](#) (with credit), here's a very detailed overview of how Super Fox Mode works:

What is SuperFox mode in WSJT-X?

SuperFox mode allows an expedition to make digital QSOs at rates higher than possible with previous versions of WSJT-X. In previous versions the Fox would transmit up to 5 streams, with each stream being 50 Hz wide.

The SuperFox transmits a full power constant-envelope waveform 1512 Hz wide. The SuperFox may send reports or RR73s to as many as nine SuperHounds simultaneously. Importantly there is no reduction in received signal strength to do so. A SuperHound will experience the same received signal strength regardless of the number of Hounds being contacted by the SuperFox. In addition, the SuperFox transmits a digital signature of authenticity. This signature allows the SuperHound to verify the legitimacy of the expedition, thereby reducing or eliminating piracy. This is covered in more detail soon.

Do I need special software?

Yes, both the SuperFox and SuperHound need to run [WSJT-X version 2.7.0-RC5](#) or newer.

FP/KV1J St Pierre & Miquelon -update by Eric

Eric writes this will be his 16th trip to the island. He says during the last few trips the amount of email requests while there increased significantly. This is a one person operation so he asks to please understand that he cannot read and respond all the emails. Eric posts logs to LoTW and Club Log daily as long as he has internet access. Skeds not possible nor band change requests. FP/KV1J will try to concentrate on the higher bands, however these two weeks are also prime for 50 MHz so Eric will always be watching that band for openings. *NOTE:* There is a group coming to the island in August with several operators.

It will be a 3-4 month long DXpedition to ZD9 which could be extended by another 2-3 months bringing it to (potentially) 6+ months. The additional months could depend on PayPal donations / extra donors. Focus is going to be on CW & SSB. There will be VERY LIMITED usage of FT8. Infact, FT8 will ONLY be used on 80 & 160 meters. Bands of operation will be 10 meters to 160 meters. 1kW to monoband heavy duty vertical antennas due to Tristan da Cunha's very inhospitable weather. No Spiderbeams. The 60, 80 & 160 meter antennas will be inverted L's with plenty of radials.
